

Trial 2020/21

VOLUNTARY PROTECTION ZONE FOR SHIPPING

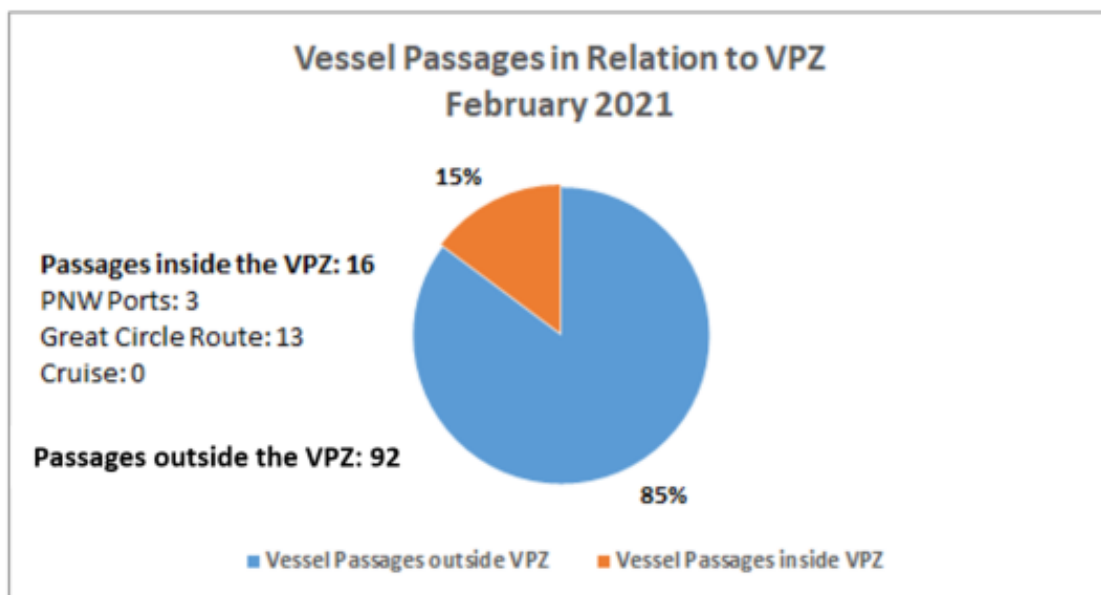

Progress Report

February 2021 Progress Report

Vessel traffic monitoring information for the [Voluntary Protection Zone \(VPZ\) for Shipping on the West Coast of Haida Gwaii](#) is provided through the [Enhanced Maritime Situational Awareness](#) system and the Pacific Safety Initiative (US). The trial VPZ asks vessels to observe a minimum distance of 50 nm from the west coast of Haida Gwaii¹. For the purpose of data collection, vessel traffic is monitored to 200 nm from the west coast of Haida Gwaii.

During the month of February, a total of **108** commercial vessel transits were observed on the west coast. Of these, **92** transits, representing **85%**, took place outside the VPZ.

The Canadian Hydrographic Service updated the electronic and paper navigation charts for the area with information on the VPZ, and issued the corresponding chart corrections in the western edition of the monthly Notices to Mariners (#02/2021) published on February 29.

¹ Commercial vessels over 500 gross tonnage are asked to observe a minimum distance of 50 nm with the exception of vessels transiting between Pacific Northwest ports, which are asked to observe a minimum distance of 25 nm, and cruise ships, which are asked to observe a minimum distance of 12 nm. Fishing vessels, and tugs and barges are not included in the trial.

Trial 2020/21

VOLUNTARY PROTECTION ZONE FOR SHIPPING

Progress Report

Cumulative Vessel Passages in Relation to VPZ Sept 1, 2020 - Feb 28, 2021

Passages inside the VPZ: 133

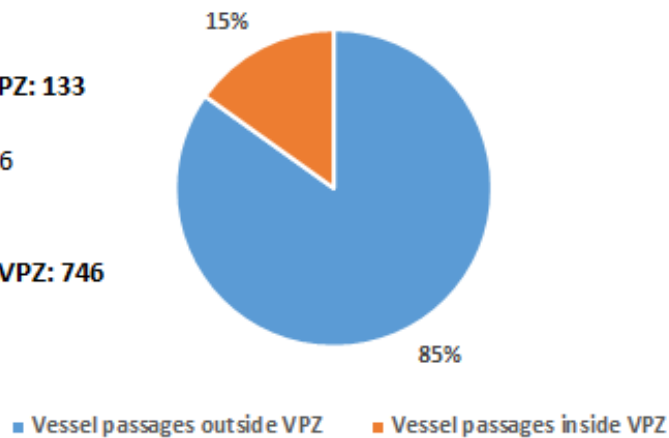

PNW Ports: 7

Great Circle Route: 126

Cruise: 0

Passages outside the VPZ: 746

Total Passages: 879
